PROFILE

Final-year Computer Engineering student with a strong passion for AI and software development, driven to transform innovative ideas into impactful, real-world solutions. Quick learner and proactive problem-solver, eager to embrace new challenges and contribute to meaningful, technology-driven advancements.

EDUCATION

NED University of Engineering and Technology

Bachelors of Engineering, Computer & Information Systems Engineering

CGPA: 3.83

Karachi, Pakistan

Graduation Date: Jun 2027

Sir Syed Govt. Girls College

Pre-Engineering Intermediate

Percentage: 87.1%

Karachi, Pakistan

Graduation Date: Oct 2022

PROJECT EXPERIENCE

Personal Project

Electricity Bill Shock Predictor

Feb 2026 - May 2026

- Built an ML system using Python and Scikit-learn that classifies electricity bills as Normal, High, or Shock and forecasts next month's usage, with an interactive widget for real-time predictions and personalized energy-saving tips.

Queendom - Play Like a Queen

Oct 2025 - Nov 2025

- Designed a powerful AI system featuring UCS, CSP Backtracking, and Hill Climbing with a visual GUI, real-time attack analysis, N-generalization, attack heatmaps, and performance benchmarking across algorithms.

Morsify - LAN Secured Messenger

Oct 2025 - Nov 2025

- Engineered a real-time, end-to-end encrypted LAN messaging platform with Morse-based text encoding, packetized data transmission, secure key rotation, and a modern WhatsApp-style UI using Python sockets and CustomTkinter.

Inventra - Warehouse Management System

Nov 2025 - Dec 2025

- A high-fidelity web application for warehouse management built using Python, Flask, SQL, and NeonDB, delivering scalable architecture, real-time inventory visibility, optimized stock control, and secure data management for enhanced operational efficiency.

Crime and Criminal Database

May 2025 - Jun 2025

- Designed and deployed a robust Crime and Criminal Database web application using Python, Flask, and SQL Server, enabling secure data management, advanced record tracking, and efficient investigative data retrieval for law enforcement workflows.

Weather Monitoring System

Nov 2024 - Dec 2024

- Developed a Weather Monitoring System in C that retrieves real-time weather data from APIs and parses JSON responses to display current weather metrics.

SKILLS & INTERESTS

Skills: Python, DSA, Problem Solving, C Programming, HTML/CSS, SQL, Logical Thinking.

Interests: Machine learning and AI, Cyber Security, Web development, Game development.

Languages: • English (Fluent)

• German (Basic)

Certificates: • Crash Course on Python – Google

• Python (Basic) – HackerRank

• AI for Everyone – [DeepLearning.AI](#)
